

# PowerSHAPE Pro

[www.delcam.com](http://www.delcam.com)

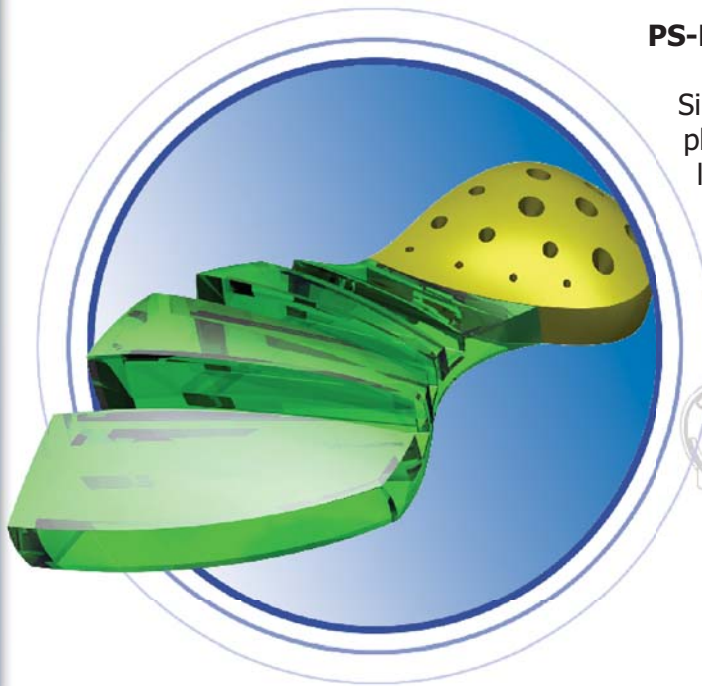

PowerSHAPE Pro provides a complete environment to take your product ideas from concept to reality. PowerSHAPE offers unrivalled freedom to manipulate surface form, to build from wireframe and make global changes with solid feature operations and editing. PowerSHAPE follows the philosophy of "Simple to create, easy to modify". PowerSHAPE Pro includes all PowerSHAPE's core hybrid modelling tools as well as a number of features that are focused specifically upon the needs of designers.

## PS-Render

Simple to use, but powerful and versatile, PS-Render creates photo-realistic images in moments. Fully customisable lighting studios and comprehensive material libraries bring your CAD models to life.

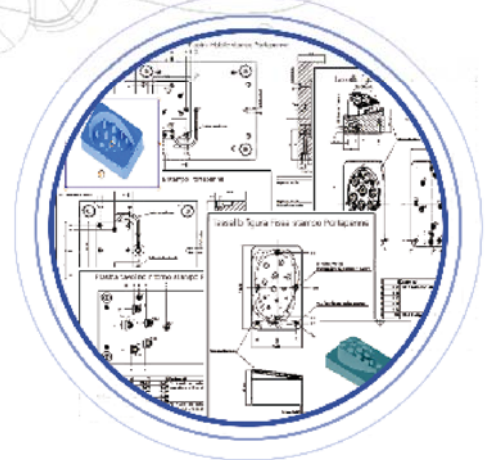

## PS-Assembly

Build complex assemblies from simple components. Create libraries of common components or sub-assemblies for instant access through a unique point and click interface

## PS-Draft

Simple drafting tools allow rapid layout of complex GA and detail drawings. Full associativity between 3D model and drafting views eliminates re-working of the drawing if the design changes.

## Total Modelling

PowerSHAPE Pro's unique 'Total Modelling' solution provides stylists with a suite of tools for creating stand-out designs. These tools include -

**Embossing** - to add intense decorative or artistic features

**Morphing** - to 'bend' an existing design to a new shape without loss of detail

**True Hybrid Modelling** - Use whatever type of data best suits your needs - solids, surfaces, wireframe, triangles - all within a single database.

**DEL CAM**
